Navigating Practical Examinations: Trials and Triumphs.

thelifeofmine3.wordpress.com/2022/03/11/practical-examinations/

March 11, 2022

On February 11, 2014, we had computer labs where we had practical exams. I received simple programs for the exam, and Sai Koti was seated next to me. The computer teacher was very attentive and caring towards me. With the grace of God, I completed the practical exam in a timely manner and returned to the classroom. My father drove me to the lab and back to the class.

On February 17, 2014, we had chemistry practicals while Pradeep had physics practicals. I wished to see Pradeep before the practicals, but Nelson and Tamil Selvam were available instead. I ended up being the last person seated in the lab, which made it difficult for me to see the experiment readings. I hesitated to ask the teacher about the titration experiment readings. I quickly took notes on the readings and answered the practical questions while they were being read, which made me a little confused and I made some mistakes. However, I did well with the salt experiment as they had specified which salt they would provide. Overall, everything went smoothly. Pradeep also performed well in his physics lab.

On February 19, 2014, I was concerned about the physics lab, but everything went smoothly. I thanked God for making it simple. We had three hours of practicals condensed into one hour and fifteen minutes. With the help of my physics teacher, I

completed the tasks quickly and easily.
